

Management Information System

March 2, 2007

H&HS Solicitation#: H&HS 20277

In compliance with the Americans with Disabilities Act, this document is available in alternate formats such as Braille, large print, audio tape, oral presentation, and computer disk. To request an alternate format call the Procurement Unit at (541) 682-7411 or TTY (541) 682-3896.

The County was recently informed that the State of Oregon will be deploying two software applications within the year designed to support the Public Health programs operating in Lane County. Lane County intends to utilize the State sponsored software packages and as a result is amending this RFP to eliminate the Public Health specific immunization functionality and Public Health program support identified in sections 6.1.1 (page 32) and Appendix D (pages 81-82).

1. This Addendum modifies RFP 20277 as follows:
 - A. H&HS will allow Vendors to submit additional written questions as to the intent or clarity of this RFP until **12:00 pm PST on March 9, 2007**. All written questions must be addressed to the Procurement Manager (see *Section 2.0*). Written responses to written questions will be distributed on **March 16, 2007** to all Vendors whose organization name appears on the Procurement Distribution List. Responses to written questions will also be available on the COUNTY website at <http://www.lanecounty.org/hhs>
 - B. Table 6.1.1. COUNTY Business Processes and Mandatory Systems Functional Requirements, Page 32, DELETE entirety of Business Process Number M.8:

Table 6.1.1. COUNTY Business Processes and Mandatory System Functional Requirements

1.0 Business Process Number	2.0 COUNTY Business Process	3.0 Business Process Description	4.0 New System Mandatory Functional Requirement
--	--	---	--

1.0 Business Process Number	2.0 COUNTY Business Process	3.0 Business Process Description	4.0 New System Mandatory Functional Requirement
M.8	Immunizations	The process of recording, tracking and managing vaccines and vaccinations administered to individuals.	The new system shall include the capability of capturing and reporting data related to: 8.1 Vaccine ordering 8.2 Shot records 8.3 Vaccine inventory in real time 8.4 Adverse events and incident reports

C. Appendix B. Description of COUNTY Programs, Page 81 and 82, DELETE the following sections:

Public Health Programs and Services

The mission of Lane County Public Health is to preserve, protect and promote the health of all people in Lane County. Our services are population based and span several program areas. Two of the programs which will be included in the new management information system are the following:

Communicable Disease Program

Within the Communicable Disease Program are the following services: adult and child immunizations, sexually transmitted disease clinic, TB case management, HIV counseling and testing, epidemiology and surveillance.

Immunizations. At the present time we provide one (1) half day immunization clinic for adults and children. This is a walk in clinic providing all the required immunizations for children and selected immunizations for adults. There are community wide flu and pneumonia shot clinics in October and November of each year.

Sexually Transmitted Disease (STD) Clinic. We provide two (2) one half day clinics on a drop in basis. The clinic is staffed by nurses, a laboratory technologist and the Disease Investigative Officer (who is a state health division employee).

Tuberculosis (TB) Case Management. The nursing staff provides TB case management services, as well as twice a week go to the Mission (a homeless shelter) to provide TB skin tests and to monitor status of possible TB at the shelter. The nursing staff also works with others in the community who have active TB as well as those who have had a positive TB skin test but have not converted to TB.

HIV Counseling and Testing. The Community Services Workers (CSW 2) and clinic nurses provide confidential and anonymous HIV counseling and testing services for high risk individuals on a drop in basis primarily during the STD clinics. The CSW 2's also provide other times for counseling and testing for high risk individuals as well as coordination of the needle exchange program with HIV Alliance and specific outreach in the community to reach high risk populations in order to reduce the spread of HIV.

Epidemiology. The nursing staff takes reports of communicable diseases from physicians and laboratories (these are primarily the reportable diseases per Oregon Statute) and do the follow-up case investigation in order to determine contacts of those with disease and to provide education and direction for the control of any spread of the disease.

Maternal Child Health Program

The goal of the Maternal Child Health (MCH) program is to optimize pregnancy, birth, and childhood outcomes for Lane County families through education, support, and referral to appropriate medical and developmental services. MCH direct services for pregnant and postpartum women and for young children and their families are provided through the following program areas: Prenatal Access, Maternity Case Management, Babies First, CaCoon, and Healthy Start.

Prenatal Access. The Prenatal Access program helps low income pregnant women access early prenatal care. Program staff determines eligibility for Oregon Health Plan (OHP) coverage during the perinatal period and directly assist with the completion and submission of the OHP application and verification of coverage. The program helps pregnant women schedule their first prenatal visit by providing prenatal health care resource information.

Maternity Case Management. The Maternity Case Management program provides ongoing nurse home visiting, education, and support services for high-risk pregnant women. Community Health Nurses help pregnant women access and utilize needed and appropriate health, social, nutritional, and other services during the perinatal period.

Babies First! The Babies First! program provides nurse home visiting, assessment and early identification of infants and young children who are at risk of developmental delays and other health conditions. Nurses provide parental education regarding ways to help their child overcome early delays, and they provide referral to appropriate early intervention services.

CaCoon. The CaCoon program provides services for infants and children who are medically fragile or who have special health or developmental needs by helping their families become as independent as possible in caring for their child, and by helping families access appropriate resources and services. CaCoon stands for Care Coordination and is an essential component of services for children with special needs. CaCoon provides the link between the family and multiple service systems and helps overcome barriers to integrated, comprehensive care.
