Description of Work:

High-Efficiency Lighting Verification

Oregon Residential Specialty Code, Section N1107.2 High-Efficiency Lighting Systems states:

A minimum 50 percent of the permanently installed lighting fixtures shall be compact or linear fluorescent, or a lighting source that has a minimum efficacy of 40 lumens per input watt. Screw-in compact fluorescent lamps comply with this requirement.

The building official shall be notified in writing at the final inspection that a minimum of fifty percent of the permanently installed lighting fixtures are compact or linear fluorescent, or a minimum efficacy of 40 lumens per input watt.

Item 1238 "BLDG-High-Efficiency Lighting" has been added to the inspection list for your project to ensure this requirement is satisfied. This inspection item will not be approved until this High-Efficiency Lighting Verification form has been completed and submitted to the Building Inspector for your project. The final inspection cannot be approved until this item is complete. Whenever possible, it is preferred that this form be completed and ready for submittal at the time of final inspection (Item 1240) and that both inspections be requested and approved at the same time.

By signing below, I certify that a minimum of fifty (50) percent of the permanently installed lighting fixtures associated with the above referenced project for the scope of work covered by the above referenced permit number have been installed with compact or linear fluorescent, or a lighting source that has a minimum efficacy of 40 lumens per input watt in accordance with N1107.2 of the Oregon Residential Specialty Code. I further attest to the fact that I am either an authorized agent of the General Contractor for the project or am the owner of the property on which the project is being built and am acting as my own general contractor.
