

MONKEYPOX IS NOT AN STI.

Monkeypox can spread to anyone through close, personal, and skin-to-skin contact, including:

- **Direct contact with monkeypox rash, scabs, or body fluids from a person with monkeypox.**
- **Prolonged physical contact such as kissing, cuddling or sex with a person with monkeypox.**
- **Touching objects, fabrics (clothing, bedding, or towels), and surfaces that have been used by a person with monkeypox.**
- **Contact with respiratory droplets from a person with monkeypox.**

Where can I go to get tested for Monkeypox?

- **If you have a rash or sore, see your primary care provider — if you don't have a provider please call (541) 682-4041. Keep the rash covered, wear a mask, and avoid skin-to-skin contact with anyone until you have been checked out.**
